The overall objective of the CIVITAS ECCENTRIC project is to demonstrate and test the potential and replicability of integrated and inclusive urban planning and sustainable mobility measures that increase the quality of life of all citizens in urban areas, with a focus on suburban districts and new real estate developments and the clean organisation of urban freight logistics.

CIVITAS ECCENTRIC focuses on sustainable mobility in suburban districts and silent and CO₂ free logistics, two important areas that have previously received less attention in urban mobility policies. In five living labs, the project demonstrates the potential and replicability of integrated and inclusive urban planning approaches, innovative policies and emerging technologies. Clean vehicles and fuels are being tested, new regulations and services formulated and consolidation solutions developed in close partnerships with the private sector.

One of the primary objectives of CIVITAS ECCENTRIC is the establishment and direct involvement of a group of 20 Observer Cities from Europe, China, India and Latin America, which will be involved in the replication and cross-fertilisation actions.

Observer Cities will have the opportunity to:
- Closely observe the demonstration activities
- Exchange directly with those responsible for implementation of project measures
- Develop Implementation Plans for replication of the demonstration measures
- Have draft strategies and project ideas peer-reviewed
- Test the replicability of the solutions demonstrated

Benefits:
- Technical support and expertise from within the consortium
- Networking with leading mobility cities
- Strategic placement in relevant working groups
- Access to funding for attending SUMP events
- Promotion of Observer Cities’ success stories through Eltis - The Urban Mobility Observatory
- Limited travel support available

Observer Cities activities:

It is envisaged that Observer Cities will engage in the following types of project activities:

- Study visits to Partner Cities
- Replication and capacity-building workshops
- Thematic and technical webinars
- Sharing of implementation reports from the demonstration measures
- Cross-fertilisation matchmaking

Requirements:

Observer cities must commit to all of the following actions:

- Development of an Implementation Plan for at least one CIVITAS ECCENTRIC measure
- Participation in at least 2 webinars per year
- Attending at least 1 study visit during the project
- Providing an annual replication update
