

“ High-quality mobility corridor

High capacity thoroughfares with high developed infrastructure that prioritizes sustainable modes of transport, including collective public transport, cycling and walking, as well as convenient connections that ease intermodal journeys

The two high quality corridors of lines 5 and 28 in the city of **Donostia-San Sebastian** led to:

+2,55 million additional travellers per year
(40% were previous car drivers or motorbike users)

excellent punctuality index of 98,20
on the two lines
